SAP SuccessFactors

– a comprehensive solution for both time and absence

SAP SuccessFactors is a modular HR system that makes it easy to integrate your HR processes, giving you both overview and insight. Since the solution is modular, you only need to register information once. This means that the absence you register to manage vacation and absence quotas will also be used for payroll processing, pension reporting, reimbursements, and any salary deductions. Smart, right?

Which SAP SuccessFactors modules you need to implement to manage time and absence effectively will depend on the structure of your time and absence processes.
Are they simple? Complex? Does all your employees work eight to foure in an office, or do you also have shift workers? Platform workers? Employees working night shifts? All these factors, and more, are crucial considerations when planning your time and absence solution.

At Sariba, we have extensive experience in the field of time and absence, as well as with SAP SuccessFactors. We know that you are the expert on your own processes, and together, we'll figure out what it takes to optimize your new time and absence solution.

Already using SAP HCM?

Then you know you have chosen a robust and reliable HR system. At Sariba, we have worked with SAP HCM for over two decades and can confidently say we are among the best in this field. We're happy to help you maintain and further develop your SAP HCM system, and when you're ready to transition to the cloud and SAP SuccessFactors, you can trust us to guide you safely through the process.
